PROFESSIONAL SUMMARY

Motivated and detail-oriented MCA student specializing in backend engineering, cloud infrastructure, and DevOps practices. Proficient in designing and deploying RESTful APIs and microservices using Java and Spring Boot, with hands-on experience in AWS EC2, Docker, and Linux administration. Demonstrated ability to build scalable, production-grade web applications and automate deployment workflows. Passionate about software engineering best practices, system reliability, and delivering high-quality solutions that align with modern product-based company standards. Actively seeking internship opportunities in Backend Development, Java Engineering, Spring Boot, Cloud Computing.

TECHNICAL SKILLS

- Programming Languages:** Java, Python, JavaScript
- Backend Development:** Spring Boot, Django, REST API Design, Microservices Architecture, API Integration
- Frontend Technologies:** HTML5, CSS3, JavaScript, Responsive Web Design
- Databases:** MySQL, MongoDB, SQL Query Optimization, Database Schema Design
- Cloud & DevOps:** AWS EC2, Docker, Linux Administration
- Tools & Platforms:** Git, GitHub, Postman, Linux CLI, Networking Fundamentals, Software Testing
- Core Competencies:** Object-Oriented Programming, Data Structures, Algorithms, System Design, Agile Methodology

EDUCATION

Master of Computer Applications (MCA) 2025 – Present

Amal Jyothi College of Engineering, Kanjirappally, Kerala

Bachelor of Science in Physics (B.Sc.) 2021 – 2024

St. Stephen's College, Pathanapuram, Kerala — University of Kerala

PROJECTS

LuxeStay — Hotel & Property Management Platform 2025 – 2026

Full-stack hospitality management system with Django backend and responsive frontend, designed for real-world scalability.

- Architected a RESTful backend API using Django to handle end-to-end room booking workflows, customer lifecycle management, and multi-tier service request processing, reducing manual operations by an estimated 60%.
- Designed and implemented a normalized relational database schema in MySQL with optimized queries supporting concurrent bookings, real-time availability checks, and transactional integrity.
- Built modular, reusable frontend components using HTML5, CSS3, and JavaScript, ensuring cross-device responsiveness and seamless backend API integration.
- Applied MVC architecture and RESTful design principles to ensure clean separation of concerns, maintainability, and ease of feature extension — mirroring enterprise-grade software development practices.

SkillsSwap — Peer-to-Peer Skill Exchange Platform 2025 – 2026

Scalable social-learning platform enabling users to share and acquire skills through structured sessions, built with a secure backend and responsive UI.

- Developed a robust backend service using Django REST Framework, implementing JWT-based authentication, role-based access control, and secure session management for a growing multi-user environment.
- Designed a dynamic user profile system supporting skill tagging, session scheduling, and peer matching logic — demonstrating complex data modeling and query optimization with MySQL.
- Engineered a scalable microservice-oriented architecture pattern with loosely coupled modules, enabling independent deployment of core features such as user management, session handling, and notification services.

- Implemented comprehensive input validation, error handling, and API versioning strategies, achieving production-ready code quality with adherence to software engineering best practices.

Cloud & DevOps Automation Suite 2025 – 2026

Collection of Python automation scripts and AWS deployment pipelines targeting infrastructure efficiency, system observability, and Linux workflow optimization.

- Authored Python automation scripts to monitor system health metrics (CPU, memory, disk I/O), detect anomalies, and trigger automated alerting — reducing manual infrastructure monitoring overhead.
- Deployed and configured cloud workloads on AWS EC2 instances, including environment provisioning, security group configuration, IAM role assignment, and application lifecycle management.
- Containerized application environments using Docker, creating reproducible build pipelines that eliminated environment inconsistency issues and streamlined the development-to-deployment workflow.
- Developed Linux shell automation scripts for scheduled job monitoring, log aggregation, process management, and cron-based task orchestration — improving operational efficiency across deployment environments.
